Module unineurone

Shown on the front panel is the schematic outline of the cell's body. Three pre-synaptic terminals of other nerve or sensory cells face the cell wall. The unineuron processes the incoming impulses from three other cells at the most (step down ratio 10:7); the result may then be passed on either via one of the inhibiting or stimulating outputs (pulse sequence).

Caractéristiques techniques
3 inputs with display for stimulating or inhibiting impulses (LED, green and red)1 output for inhibiting impulses (red)1 output for stimulating impulses (green)1 site for mounting the drug function module (662 215)Stimulation threshold: 1 HzDimensions: 125 x 125 x 45 mmWeight: 0.2 kg
